

RRO Scenario Designer Path Extension Manual v1.2

This mod contains 36 paths for the scenario designer of the route "Rhein-Ruhr Osten". In this, unlike in the vanilla version, a large part of the portals are used. As a result, paths are also included that are only intended for AI traffic.

The 10 paths from the vanilla version are still present so that scenarios created without this mod will still work. However, I do not recommend using the passenger traffic paths, as the vanilla paths contain bugs such as incorrect platforms and doors opening on the wrong side. However, the freight paths for freight traffic without the use of portals can still be used without any problems.

The new paths from this mod represent a large part of the real, scheduled traffic on the Rhein-Ruhr Osten route (Wuppertal - Hagen) in 2021. Only some paths for lines operated with diesel vehicles I did not include for now, because there are no suitable vehicles available in TSW yet. Paths for detours (e.g. for long-distance trains via the S-Bahn line) or special cases might be added in a later version. If you have wishes for concrete paths or suggestions for improvement of the already included ones, feel free to contact me and tell me about them. They may also be fictitious; I'll see what I can do.

In addition, I have added stops on many long-distance and pure RE paths that are otherwise only used by RBs and REs, such as Wuppertal-Oberbarmen or Ennepetal, so that the AI trains can be started flexibly.

Instructions for scenario creators

You are of course welcome to use this mod for your scenarios, but then you must obviously refer to this mod in your readmes or in the mod description, otherwise others will not be able to run your scenario. In addition, you should always include the version number of this mod, so that your scenarios can still be run after the release of new versions of this mod. Also, I would be happy if you let me know (via DM or Discord) if you use my path extension for your scenarios. I am curious about your creations with my mod.

Paths are included for the following lines:

- S-Bahn: S 8, S 9
- Regionalbahn: RB 48
- Regionalexpress: RE 4, RE 7, RE 13
- KI only: S 5, RB 40, RB 91, RE 16, RE 49
- Fernverkehr
- Freight

Changelog

v1.2 02.12.2021

Version 1.2 is fully compatible with scenarios designed for version 1.0 (and newer).

- DB G6 and BR 612 available without "Off the Rails"

v1.1 21.08.2021

Version 1.1 is fully compatible with scenarios designed for version 1.0.

- Support for the UE 4.26 / Rush Hour Update
- BR 112 available without "Off the Rails"
